# CASE STUDY

## About Symrise

Symrise is a global expert in solutions for palatability, nutrition, and animal health.

Operating through two core segments—Taste, Nutrition & Health and Scent & Care—the company operates over 30 production sites across 5 continents with over 1,800 employees worldwide.

## THE OBJECTIVE

Guarantee a high level of food safety in a multi-site production context, where:

1. The risk of finished product contamination is critical.
2. Quality processes must be fast, reliable, and traceable.
3. Teams need a tool to effectively manage sampling plans.

---

> “EnviroMap is a highly capable tool with diverse applications. It offers a clear definition of the points to evaluate, facilitates the consolidation of microbiological results, supports the monitoring and planning of actions, and allows for a clear and simple evaluation of trends. This ensures effective microbiological control and supports a continuous improvement approach.”

**Elaine Mapeli**
QHSE Manager - Latin America

## SOLUTION PROCESS

To enhance its quality control infrastructure, the company deployed EnviroMap, a secure, cloud-based environmental monitoring platform. The implementation focused on four strategic pillars:

- **Automatically schedule sampling and label printing to ensure traceability.**
- **Centralize and visualize data from multiple plans (environment, water, etc.).**
- **Track corrective actions and identify sensitive areas.**
- **Monitor quality performance in real-time, at both the group level and across multiple sites.**

## RESULTS

The implementation of the new system yielded immediate, measurable improvements across both operational efficiency and risk management. Specifically:

- **Reduction of the contamination risk for finished products, and an improved trust relationship with clients.**
- **Improved responsiveness and productivity regarding non-conformities and optimization of cleaning plans.**
- **Reduction of time spent on manual tasks (up to 4 hours per week).**
- **Enhancement of client audits thanks to clear and centralized results.**

> “EnviroMap is an excellent tool that helps us identify samples, analyze results trends, and manage environmental monitoring plans. It has undoubtedly made our controls more robust.”
